About i-TAPS

No matter where you are, i-TAPS lets you see real-time solar plant performance parameters, historical data for analysis and maintenance. You can view multiple aspects of solar generation like inverter performance, energy meter readings, solar irradiance, utility supply downtime, ambient temperature, etc. If multiple solar plants are registered to the same client then all of them can be monitored in the app. The following are the key features:

Key features

- Monitor real-time solar plant performance
- View historical data for analysis and maintenance
- Track generation and inverter performance
- Monitor solar irradiance and ambient temperature
- Track utility supply downtime
